

Prompt For Developing A Smart Invoicing System:

Develop a smart Invoicing System

The system should allow users to:

- Create, edit, and delete invoices.
- Auto-generate invoice numbers sequentially.
- Fill client details (name, address, GSTIN, email, phone) using AI suggestions after partial input.
- Add multiple products/services to an invoice with quantity, price, tax, and total.
- Automatically calculate subtotal, tax, discounts, and grand total.
- Predict due dates based on client payment behavior (learned over time).
- Auto-suggest best payment terms based on client history (e.g., "Net 15", "Net 30", etc.).
- Generate PDFs of invoices with customizable templates.
- Send invoices by email directly from the platform.
- Provide a dashboard with insights (like total sales, pending payments, overdue invoices).

Use Manus AI's capabilities for:

- Auto-filling repetitive information.
- Smart suggestions and corrections.
- Predictive analytics for due dates and payment behaviors.
